

Support HB 2924: Down Syndrome Information Act by Rep. Brooks Landgraf

Goal: Texas Alliance for Life supports a requirement that parents receiving a Down syndrome diagnosis also receive state-prepared information that provides valuable medical and science based information.

Background:

Down syndrome is the most commonly occurring genetic condition. According to the National Down Syndrome Society, one in every 691 babies in the United States is born with Down syndrome. If these numbers are applied to Texas, that would mean in 2012, 553 babies were born with Down syndrome.

Despite being the most common genetic condition, the abortion rate on babies diagnosed with Down syndrome is likely somewhere between 61 and 93 percent,¹ which corresponds to thousands of abortions on babies with Down syndrome in Texas each year.

House Bill 2924:

HB 2924 would provide parents receiving a Down syndrome diagnosis with timely information. HB 2924 requires the state-prepared information to address the following:

- Physical, developmental, educational, and psychological outcomes.
- Intellectual and functional development.
- Available treatment options.
- Contact information for national and local Down syndrome education and support programs and services.

All the information must be current and evidence-based, and it must be reviewed by local and national Down syndrome organizations.

Importantly, this state-prepared information may not present abortion as an option.

Per the Supreme Court decisions *Roe v. Wade* and *Planned Parenthood v. Casey*, this bill does not limit a woman's right to terminate a pregnancy. It also does not prohibit a doctor from speaking about abortion.
