

Partial-Birth Abortion Procedure

Guided by Ultrasound, the abortion doctor grabs the baby's leg with forceps.

The baby's leg is pulled out into the birth canal.

The abortion doctor delivers the baby's entire body, except for the head.

The abortion doctor jams scissors into the baby's skull. The scissors are then opened to enlarge the hole.

The scissors are removed and a suction tube is inserted. The child's brains are sucked out causing the skull to collapse.
